The Future of Automation and Your Company

Page 23

Introduction

Modern leadership faces the constant challenge of balancing operational efficiency, innovation, and competitiveness.

In this dynamic landscape, **automation based on autonomous AI agents emerges as an indispensable tool,** transforming complex processes into strategic opportunities.

This guide was created for leaders who seek not only to understand trends but also to make informed decisions. Here, we will explore the disruptive potential of AI agents, their applications, and most importantly, how they can position your organization ahead in the market.

If you lead teams, manage processes, or seek innovation, **this is the guide you need to understand and adopt intelligent automation.**

The Landscape of Automation with Autonomous Al Agents

Automation is no longer a novelty. It is deeply rooted in modern operations, from production lines to large-scale data analysis, but what we are experiencing now **is a new era.**

Autonomous AI agents represent intelligent automation, or **Automation 2.0**, where systems not only follow rules but also learn, make decisions, and evolve based on real-world data and scenarios.

WHY DOES THIS MATTER?

According to Gartner, by 2028, at least 15% of daily work decisions will be autonomously made through agentic AI, up from 0% in 2024. Companies leading this adoption are already reporting significant gains in efficiency and

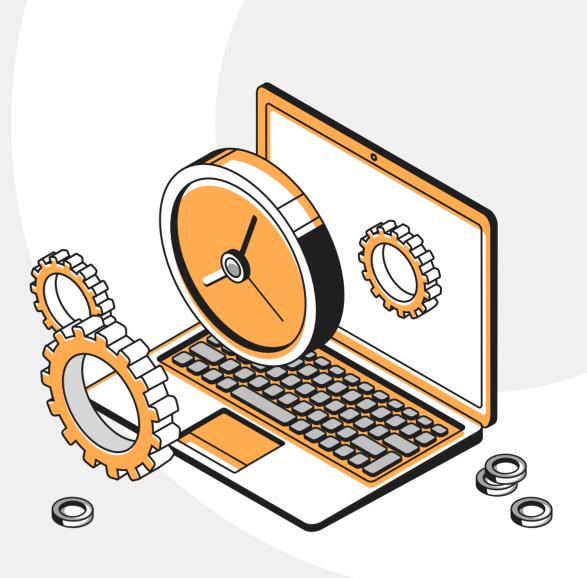

competitiveness.

This transformation is no longer about doing things "faster." It's about doing things "better" and "smarter."

Automation has evolved in three major waves:

TRADITIONAL AUTOMATION / RPA 1.0 INTELLIGENT AUTOMATION / AI WORKFLOWS / RPA 2.0

02

03

AUTONOMOUS AI AGENTS

Traditional Automation is more deterministic and focused on repetitive tasks based on clear rules, such as structured data processing and the generation of predefined outputs.

AUTOMATION (ROBOTIC PROCESS AUTOMATION 1.0 OR RPA 1.0)

Examples of traditional automation include the automation of managerial processes, automatic updating and maintenance of systems and databases, file processing for integration, periodic report generation, among others.

Q2 AUTOMAÇÃO INTELIGENTE / AI WORKFLOWS / RPA 2.0

Examples:

CREDIT APPROVAL SYSTEMS

Used by banks and fintechs for predictive risk analysis, enabling fast, data-driven decisions.

LOGISTICS OPTIMIZATION

Applications for forecasting seasonal demand, optimizing transportation routes, and minimizing waste across the supply chain.

UNSTRUCTURED DATA

Intelligent Automation, also known as AI Workflow or RPA 2.0, involves **integrating AI processing within the workflow of a deterministic process.** This incorporation allows systems to process unstructured or subjective data and add intelligence to the process—something that is not possible with RPA 1.0.

Workflows can incorporate routing decisions within the process itself, based on **real-time AI-driven data interpretations.**

Predictive analytics mechanisms embedded in the workflow can anticipate behaviors and **identify complex patterns, optimizing critical processes and dynamically adapting to new data and contexts.**

Recent Studies Highlight the Positive Impact of This Technology:

GARTNER,

"HYPERAUTOMATION TRENDS 2024":

Reports that intelligent automation tools can increase organizational efficiency by up to 30%, particularly in areas like finance, customer service, and logistics operations.

Source: www.gartner.com/en/articles/gartner-top-10-strategic-technology-trends-for-2024

PROCESSING

Systems can extract insights from unstructured data in real time, enhancing decisionmaking capabilities.

MCKINSEY,

"THE NEXT NORMAL IN OPERATIONS":

Highlights that adopting AI-powered intelligent workflows helps optimize processes such as credit approval and logistics management, achieving up to 20% reductions in operational costs.

Source: www.mckinsey.com/capabilities/operations/our-insights/rethinking-operations-in-the-next-normal?utm_source

O3 AUTONOMOUS AI AGENTS

Autonomous AI agents establish a new level of automation, enabling systems to operate independently, make decisions based on continuous learning, and **adapt to new information in real time.**

Unlike previous approaches, they may not have rigid rules dictating how they should work but rather **broader guidelines on how specific tasks should be performed.** Autonomous AI agents operate in specialized ways and can be developed to work individually or in groups, known as Multi-Agents.

Autonomous AI agents are designated as professionals or members of a work team. For example, it is possible to create a Multi-Agent system that functions exactly like an advertising agency, consisting of a Marketing Director, Advertiser, Copywriter, Designer, Proofreader, and Coordinator. Each role in this team is represented as an Autonomous Agent with its own skills and functions. These agents receive tasks and are coordinated by the Coordinator. Each one contributes to a broader process in this example, the team of agents would be capable of developing a complete marketing campaign.

An important feature is that tools, such as applications and systems, can be provided for the agents to use in executing their tasks.

Key Characteristics of Autonomous Al Agents

OPERATIONAL INDEPENDENCE

Using techniques such as generative AI models and memory, these agents can adjust their strategies based on market variables or changes in operational environments. They are specialists who receive a task and determine the best way to execute it.

CONTINUOUS LEARNING CAPABILITY

These systems leverage real-time data to learn and adjust their behavior without the need for manual reprogramming.

Examples of Use Cases

FINANCIAL ASSISTANTS

Tools from companies like Morgan Stanley that use Al to personalize investment strategies based on clients' objectives.

AUTONOMOUS SUPPLY CHAIN MANAGEMENT

Companies like Amazon and Walmart utilize agents to monitor inventory and automatically adjust deliveries, reducing waste and optimizing timelines.

ADVANCED CHATBOTS

Applications like ChatGPT are used for technical These agents serve as strategic allies, allowing support, sales, and customer service at scale, organizations to scale operations and quickly adapt to market changes while keeping competitiveness and providing personalized and innovation at the core of their strategies. rapid responses.

Research Validating Strategic Relevance

PWC.

"THE POTENTIAL OF AUTONOMOUS AGENTS IN BUSINESS":

Estimates that autonomous agents can increase productivity by up to 25%, directly impacting areas such as supply chain and finance.

Source: www.pwc.com/us/en/tech-effect/ai-analytics/aipredictions.html

DELOITTE,

"AI AND THE FUTURE OF WORK":

Highlights how autonomous agents are being used in the financial sector to analyze portfolios in real time and provide personalized recommendations based on continuous learning.

Opportunities for Modern Management with Autonomous Al Agents

Autonomous Al agents transform management by bringing intelligence and autonomy to processes, generating efficiency, accuracy, and agility. This technology expands strategic possibilities, keeping organizations competitive in an ever-changing market. Below are some opportunities:

COST REDUCTION

Companies adopting automation report efficiency gains of up to 40% and operational cost reductions of up to 30%. Al agents extend these benefits to complex areas like customer service and logistics.

Source: www.mckinsey.com/capabilities/mckinsey-digital/our-insights/

the-economic-potential-of-generative-ai-the-next-productivity-frontier

ERROREliminating human errors in critical processesREDUCTIONincreases data security and reliability.

OPERATIONAL SCALABILITY

Scaling operations without a proportional increase in human resources is a **clear competitive advantage**, especially in dynamic markets.

DATA-DRIVEN DECISION MAKING

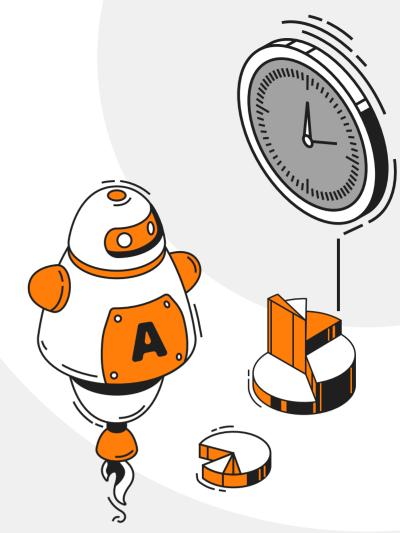

Al agents enable **real-time analysis** and detailed insights, optimizing strategies and streamlining operations.

SPEED IN ADAPTING TO CHANGE Automated companies can **quickly respond to market changes**, adjusting efficiently and precisely.

GLOBAL TREND

According to PwC, AI could add \$15.7 trillion to the global economy by 2030, making it one of the largest drivers of economic growth

MARKET DIFFERENTIATION OPPORTUNITY Pioneering companies in intelligent automation have a unique window of opportunity to stand out in terms of efficiency and innovation.

COMPETITIVENESS AND INNOVATION Al agent automation cannot be ignored because it directly impacts competitiveness, efficiency, and the ability to innovate, making it a critical success factor in today's digital transformation landscape.

Implementing AI-based automation can be a challenging yet rewarding journey. To help organizations get started, it's essential to follow a structured and strategic approach.

Here's a step-by-step guide to begin intelligent automation.

STRATEGIC ALIGNMENT AND GOAL SETTING

01 IN-DEPTH STUDY OF THE CURRENT LANDSCAPE Before embarking on any automation journey, it's crucial to conduct an in-depth study of the current landscape. This includes **identifying which AI agents are most relevant to your business** and emerging technologies that can be applied.

Market analysis and the selection of specific frameworks are essential to ensure that the solution meets the organization's needs.

According to McKinsey's study on the impact of automation, organizations should evaluate how their operations can be transformed by specific intelligent automation technologies.

02 STRATEGIC ALIGNMENT AND GOAL SETTING

It's crucial to align automation with the organization's **strategic goals.** Set clear and measurable goals to understand how automation will contribute to improving **operational efficiency, cost reduction, and competitiveness.**

Gartner's research emphasizes that companies that align their technological initiatives with strategic goals are more successful in implementing automation. This helps ensure that AI and automation solutions deliver tangible results for the business.

The next step is to **conduct brainstorming sessions** with the involved teams and perform an **internal assessment**

BRAINSTORMING AND INTERNAL ASSESSMENT

to understand which processes can be automated.

The internal assessment should identify areas with the highest potential for improvement and automation, such as repetitive processes or those requiring data-driven decisions.

Collaboration among multidisciplinary teams and gathering information about existing operations helps identify weaknesses and opportunities for intelligent automation.

DEFINING TECHNOLOGIES AND APPROACHES THROUGH POCS

After analyzing the landscape and setting goals, **it's time to choose the right technologies.** Using Proof of Concepts (POCs) is a common strategy to test solutions before full-scale adoption. With POCs, you can assess the effectiveness of selected technologies, such as RPA (Robotic Process Automation), Al workflows, and autonomous agents.

POCs help companies validate their technology choices, allowing teams to identify potential challenges and adjust approaches before making a full commitment.

05 SOLUTION ENHANCEMENT

Once automation has been implemented, it's important to maintain an ongoing process of solution enhancement.

Automation should be regularly adjusted based on performance feedback, market evolution, and new technological opportunities. Continuous optimization helps maximize the long-term value and impact of automation.

The constant evolution of automation solutions is necessary to stay competitive and innovative. Companies that invest in continuous improvement ensure that their operations remain relevant and effective.

Implementation and continuous monitoring are key to ensuring the success of automation. The solution must be carefully monitored to ensure it's delivering the expected results. It's important to adjust automation based on performance and market changes.

According to P<u>wC</u>, studies, effective monitoring of AI and automation solutions helps companies quickly adapt to market condition changes and identify new improvement opportunities.

operational risks.

Traditionally, risk management has been based on manual analysis and audits, processes that are becoming increasingly ineffective as business environments become more dynamic and data-driven.

With the evolution of emerging technologies, Al agents have revolutionized this approach, offering autonomous and intelligent solutions to detect, predict, and mitigate risks in real-time.

By processing large volumes of data instantly and identifying complex patterns that could be overlooked by humans, **these** agents provide more agile, accurate, and, above all, proactive risk management. They anticipate threats, enabling businesses to make more informed decisions and prepare for potential crises before they materialize.

RELEVANCE TO THE SECTOR

The importance of AI agents in the risk management sector goes beyond process automation. With more complex global businesses and vast amounts of data to analyze, these tools become essential for maintaining competitiveness and security.

Al agents not only help detect risks more quickly but also transform risk management from a repetitive task into a strategic function focused on prevention and anticipation.

As a result, AI agents enable risk teams to focus on more strategic issues, adding value and protecting businesses from financial losses and reputational damage.

USE CASES OF AI AGENTS FOR RISK MANAGEMENT

PREDICTIVE ANALYSIS AND FRAUD DETECTION	Al agents can analyze large volumes of data to identify abnormal or suspicious behavior patterns that may indicate fraud or imminent risks. With machine learning techniques and neural networks, they can learn from historical data and identify new threats.
CREDIT RISK MANAGEMENT	Autonomous agents can assess the credit risk of potential clients more accurately by analyzing financial, behavioral, and market data. Additionally, they can anticipate changes in economic conditions and client risk profiles.

OPERATIONAL RISKAl agents can be programmed to identify and predict
operational risks, such as system failures, supply chain
disruptions, or internal process breakdowns. Al can alert
managers to areas of vulnerability, allowing corrective
actions before the issue materializes.

REPUTATION	Al agents can monitor social media, media outlets, and other
RISK	public sources to quickly detect potential reputation issues
	that may affect the company's image. Based on sentiment
	analysis and mentions, they can predict crises before they
	spread.

INVESTMENT RISKAl agents can perform simulations and risk modeling toMODELINGpredict future scenarios based on economic variables, interestrates, volatility, and other factors. This helps portfoliomanagers identify risks that could compromise theirinvestments.

Agentic Now: Softo's Solution for Autonomous **AI Agents**

Agentic Now is Softo's customized Al agent factory for organizations that want to implement Autonomous Agents and AI Workflows in their operations, bringing intelligent automation to complex processes, real-time decision-making, and greater strategic efficiency.

This solution consists of four key stages designed to ensure technological transformation in an agile, personalized, and sustainable manner.

• • • • • • • • 02 04 CONSULTING, **DEVELOPMENT OF FINAL SOLUTION OPERATIONAL** POCS (PROOFS OF SUPPORT **BRAINSTORMING**, **DEVELOPMENT AND**

AND ASSESSMENT

CONCEPT)

IMPLEMENTATION

01 CONSULTING, BRAINSTORMING, AND ASSESSMENT

The starting point for any autonomous AI agent initiative is a deep understanding of organizational needs and context. At this stage, we combine technical expertise with business insight to define a clear and effective roadmap.

STRATEGIC CONSULTING

Identifying critical areas where autonomous agents can add the most value.

STAKEHOLDER BRAINSTORMING

Collaborative exploration of ideas for applying autonomous agents, aligning business objectives with technological possibilities.

INTERNAL ASSESSMENT

A detailed analysis of processes, infrastructure, and available data, focusing on detecting bottlenecks and opportunities for intelligent automation.

POCs are essential for validating ideas before full development and implementation, reducing risks and ensuring the practical feasibility of proposed solutions.

PROTOTYPE CREATION

Small-scale tests to evaluate how autonomous agents

perform specific functions within the company's environment.

TECHNICAL AND BUSINESS VALIDATION

Collecting feedback from internal teams and evaluating initial results, such as error reduction, time savings, and ROI.

QUICK ADJUSTMENTS

Continuous refinement based on insights generated during the POC phase.

FINAL SOLUTION DEVELOPMENT AND IMPLEMENTATION

Based on the learnings from the POC, we develop and implement the full solution, ensuring maximum integration and scalability.

SOLUTION CUSTOMIZATION

Tailored AI models configured and trained with the organization's data to meet the specific demands of the process.

INTEGRATION WITH EXISTING SYSTEMS

Autonomous agents interact seamlessly with existing platforms, processes, and workflows.

FULL-SCALE TESTING

Conducting robust tests to validate performance, security, and solution stability.

After implementation, we offer continuous support to maximize results and ensure the solution evolves with the business needs.

TEAM TRAINING

Training employees to operate and extract maximum value from the implemented solution.

OBSERVABILITY, MAINTENANCE, AND UPDATES

Constant monitoring of autonomous agent performance, applying improvements and updates as needed.

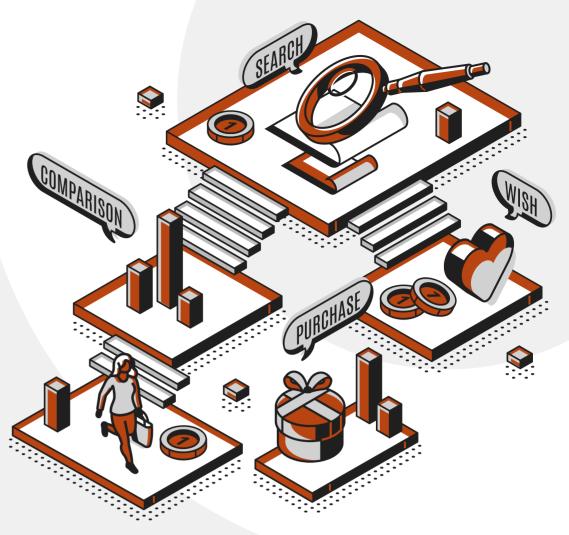

EVOLUTION AND SCALABILITY

Identifying new opportunities for applying autonomous agents in other areas of the organization, expanding the solution's impact.

How to Measure the Results of Al Agent **Implementation?**

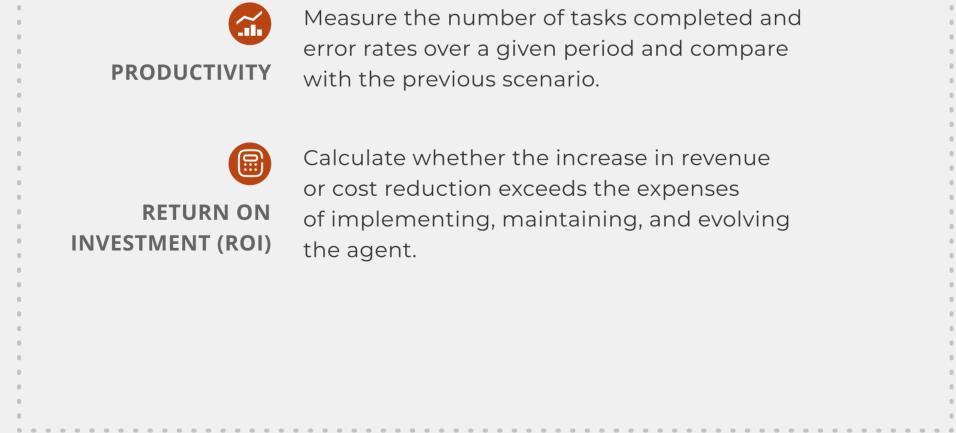

BUSINESS METRICS (HIGH-LEVEL KPIS)

Analyze the before and after of adopting autonomous agents, considering labor costs, rework, or resources that were automated.

Check if there was an increase in sales, upsell/ cross-sell, or conversion rates.

SATISFAÇÃO DE USUÁRIOS INTERNOS E EXTERNOS

CUSTOMER SATISFACTION (NPS, CSAT)

(:)

If the autonomous agent interacts directly with the public (e.g., a chatbot or recommendation tool), Net Promoter Score (NPS) or customer satisfaction indices can be measured.

EMPLOYEE FEEDBACK When the agent is used for internal support or direct interaction with the team, it's important to measure how much the teams feel the solution improves their daily tasks or aids in decision-making.

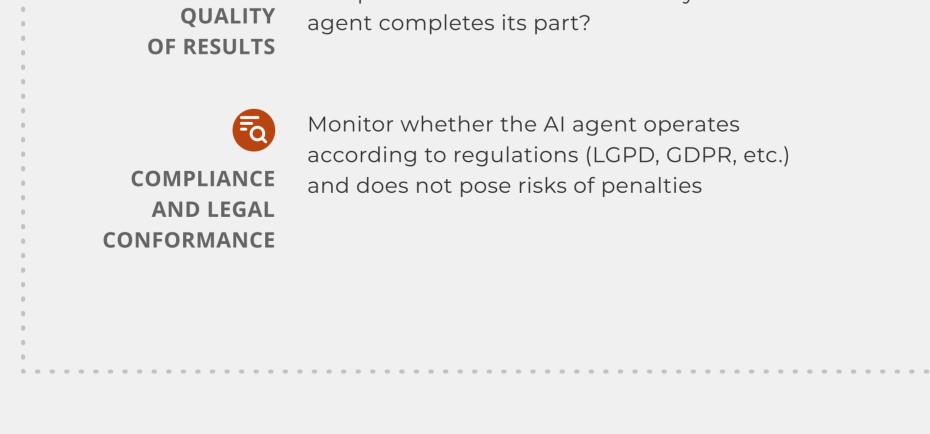

How many people actually use and trust the autonomous agent once it's deployed?

PROCESS QUALITY AND RELIABILITY

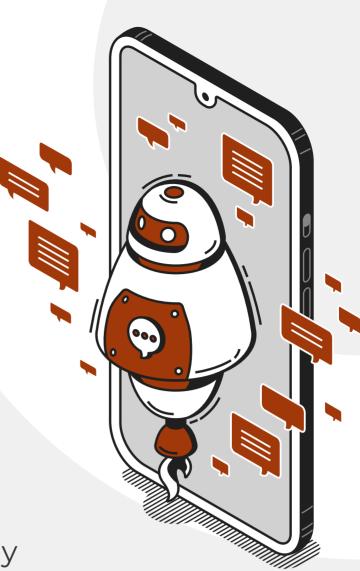

In process automation tasks, how many exceptions or rework are necessary after the AI

Automation, driven by AI agents, is becoming increasingly integrated into business processes, transforming the way companies operate.

DEEP INTEGRATION WITH AGENT SYSTEMS

The future of automation lies in creating Agent Systems, where **multiple autonomous agents work together to optimize complex operations**, potentially even reaching the level of strategic management within companies

These systems go beyond automating specific tasks; they will be **capable of interacting with each other and making real-time data-driven strategic decisions.** This will enable greater efficiency and adaptability.

RESKILLING AND CHANGING JOB PROFILES As automation evolves rapidly, job profiles will undergo significant changes. **Professionals will need to reskill to handle advanced technologies**, focusing on higher-value strategic roles. Repetitive and manual tasks will be delegated to AI agents, **while human employees will concentrate on creative, analytical, and decision-making functions.**

AUTOMATION AS A STRATEGIC FOUNDATION

Al and automation will no longer be seen as isolated, one-off projects; they will become **strategic foundations**, essential for innovation, competitiveness, and value creation. Companies that embrace this vision will be able to:

- Define new ways of working, integrating collaboration between humans and autonomous agents.
- Create sustainable value, developing customized solutions and enriching experiences for customers.
- Compete more efficiently in the market, using data and predictive analytics to make faster and more accurate decisions.

Organizations that adapt their strategies to include automation at their core will not only stay relevant but will also be one step ahead in the business world.

Unlock the Power of Al Agents to Thrive Your Business with Agentic Now!

At Softo, our AI experts are ready to offer customized solutions with artificial intelligence agents, designed to act as digital partners.

Leverage the potential of AI agents to:

02 01 03 04 AUTOMATE GAIN REAL-TIME **INCREASE** MITIGATE RISKS AND PREDICT COMPLEX STRATEGIC **OPERATIONAL** PROCESSES **EFFICIENCY SCENARIOS** INSIGHTS

Prosper your business with Softo's Customized Solutions!

Softo is a software house specialized in developing tailor-made solutions. Combining cutting-edge technology, experts, and an agile approach, we help businesses transform complex challenges into impactful innovations.

Additionally, we integrate AI agents to bring intelligence and automation to your solutions, enhancing efficiency and creating new opportunities for your business.

Schedule a free consultation and discover how Al agents can become strategic allies for your business growth.
